Application - Graduate Engineer

Dear MPS Careers Team,

I am applying for the Graduate Engineer position advertised on the Metro Project Services careers page. The structured exposure to setout, quality, procurement and program work under a senior engineer closely matches the practical site-based direction I want to build in civil infrastructure.

I hold a Bachelor of Science in Civil Engineering and completed an Australian Advanced Diploma of Civil Construction Design in February 2026. My diploma work covered road geometry, earthworks, pavement systems and stormwater drainage, with technical drawings prepared and reviewed using AutoCAD and Civil 3D. This software and design experience is academic rather than commercial, but it gives me a sound base for reading civil documentation and learning MPS processes under supervision.

My earlier construction roles in the Philippines included a community hall renovation and residential subdivision finishing works. I reviewed structural and architectural drawings, coordinated daily site activities, completed inspections and quality checks, tracked materials and procurement, maintained progress records, and communicated with engineers, subcontractors, suppliers and clients. These duties are directly relevant to supporting quality records, site coordination, procurement tracking and program reporting on MPS sewer, stormwater and civil packages.

I am based in Melton and am available for site and office work across metropolitan Melbourne. I hold an Australian driver's licence, reliable transport and a White Card. I have full working rights in Australia under a Subclass 485 visa until December 2027. I would value the opportunity to learn from MPS directors and senior engineers while contributing reliably to project documentation and day-to-day delivery.

Thank you for considering my application. I would welcome the opportunity to discuss how my practical construction background and recent Australian civil design training could support Metro Project Services.

Kind regards,

Marc Darenz Masarate
