Full working rights to December 2027

11 September 2026

Hiring Team

Osborn Consulting Engineers

Expression of interest - junior civil design, documentation or site support

Dear Hiring Team,

I am writing to ask whether Osborn Consulting Engineers has any suitable paid junior opportunities in civil design, documentation or site support. I understand that I am not applying for a confirmed advertised junior vacancy. My interest comes from Osborn's work across land development, subdivisions, roads, stormwater, water and sewer infrastructure, as well as its involvement through design and construction.

I completed an Australian Advanced Diploma of Civil Construction Design in February 2026, following a Bachelor of Science in Civil Engineering completed in 2019. Through the diploma I prepared and reviewed civil drawings using AutoCAD and Civil 3D and studied road geometry, earthworks, pavement systems and stormwater drainage. This is academic software and design experience rather than commercial production-drafting experience, and I would be looking to develop it under experienced engineers and designers.

My earlier construction experience involved supporting a community hall renovation and residential subdivision finishing works in the Philippines. I coordinated daily site activities, reviewed structural and architectural drawings, completed inspections and quality checks, tracked materials and progress, prepared site records, and worked with engineers, subcontractors and suppliers. These experiences would help me contribute practically while learning Osborn's systems and Queensland requirements.

I am based in Melton, Victoria and would welcome a discussion about regional or interstate opportunities without assuming relocation arrangements. I hold an Australian driver's licence, reliable transport and a Victorian White Card. I have full working rights in Australia under a Subclass 485 visa until December 2027.

Thank you for considering my enquiry. I would appreciate the opportunity to discuss whether my civil construction background and current Australian design training could suit any supervised junior work with your team.

Kind regards,

Marc Darenz Masarate
