Junior Civil Engineer opportunity

Dear Jeremy,

I am writing about your Junior Civil Engineer vacancy in Albany. The opportunity to work alongside project managers and site teams fits the direction I want to take: practical construction delivery, site coordination and supervision support. I am currently based in Melton, Victoria. I understand you are seeking someone in Albany or the Great Southern, and I would welcome a conversation if you would consider an applicant willing to relocate.

In the Philippines, I worked as an entry-level Project-in-Charge Engineer with JustBuilt and as a Field Engineer with Grand Travaux. At JustBuilt, I coordinated the daily activities of 10-15 workers, checked work against drawings and carried out site and quality inspections. At Grand Travaux, I supported subdivision finishing works, tracked materials and procurement, and maintained site reports and progress records. These roles taught me to communicate work priorities clearly and raise issues when clarification was needed.

I also completed an Advanced Diploma of Civil Construction Design at Albright Institute in February 2026, following my Bachelor of Science in Civil Engineering. My Australian studies included drawing preparation and review using AutoCAD and Civil 3D, with consideration of construction requirements and existing services. I would bring that drawing knowledge to your site team while continuing to learn your project systems and processes.

I hold an Australian driver's licence, have reliable transport and a White Card, and have full working rights on a Subclass 485 visa until December 2027. My tailored resume is attached. I would appreciate the opportunity to discuss how my background could support your projects and whether relocation would be workable for this role.

Kind regards,

Marc Darenz Masarate
