Dear Careers Team,

Re: Junior Structural Drafter - Bunbury or West Perth

I am applying for the Junior Structural Drafter position listed on WML Consulting Engineers' careers page. I completed an Australian Advanced Diploma of Civil Construction Design in February 2026 and hold a Bachelor of Science in Civil Engineering. The opportunity is well aligned with my goal of developing practical drafting capability while contributing reliable documentation and careful project support.

During my Advanced Diploma, I prepared and reviewed technical drawings using AutoCAD and Civil 3D and developed documentation covering road geometry, earthworks, pavement systems and stormwater drainage. I also used Revit during my studies and developed a broader civil engineering foundation that includes structural principles and construction methods. My software experience is academic rather than commercial production drafting, so I am specifically seeking a junior role where I can learn WML's standards and workflows under experienced designers and engineers.

My earlier construction work gives me a practical understanding of how drawings are used on site. At JustBuilt, I reviewed structural and architectural drawings against project requirements, coordinated the daily activities of 10-15 workers and carried out quality and safety checks. At Grand Travaux, I supported site inspections and maintained progress and material records. These experiences strengthened my attention to detail and my communication with engineers, subcontractors and suppliers.

WML's structural work across industrial, mining, commercial, institutional and residential projects would provide the varied environment I am looking for. I am based in Melton, Victoria and am open to discussing relocation to Bunbury or West Perth. I hold a White Card, an Australian driver's licence with reliable transport, and full working rights under a Subclass 485 visa until December 2027.

Thank you for considering my application. I would welcome the opportunity to discuss how my recent civil design qualification, practical construction background and willingness to learn could support WML's structural team.

Kind regards,

Marc Darenz Masarate
